Ear defenders

Honeywell

68161

Leightning L2F High Visibility

Design

- Foldable headband allows for practical storage
- Luminous green defenders ensure excellent visibility in bad weather or in the dark
- Reflective headband is highly visible when light shines on it, offering greater safety
- Air Flow Control technology provides optimum insulation capacity at all frequencies
- Tested in accordance with EN 352-1

Applications

Ideal for wearing at night, in low lighting conditions and poor weather conditions.

68162 101

Leightning L2

Design

- Spring steel headband for working in extreme conditions
- The soft foam padding of the headband and the comfortable ear pads (replaceable) offer maximum comfort, even when worn for long periods of time
- A perfect fit on all head sizes is guaranteed thanks to the telescopic height adjustment
- Tested in accordance with EN 352-1

Applications

For moderate noise ranges and long periods of use.

68161

68162

Type	SNR value dB	Weight g	68161	...	68162	...

Leightning L2	31	222				101

3M PELTOR™**68163 101****Optime I****Design**

- Very versatile and particularly lightweight (180 g)
- These ear defenders have a slim profile, but feature a generous depth inside
- Easy to combine with other equipment
- The ideal choice for those needing all-round ear defenders for short or longer periods of use
- **Tested in accordance with EN 352-1/352-3**

Applications

For low-level noise exposure. In workshops, plumbing tasks, in print shops, for hobbies and leisure use.

68163 201**Optime II****Design**

- The Optime II has been developed for high-level noise exposure and provides effective protection, even at very low frequencies
- The sealing rings are filled with a mixture of liquid and foam and ensure an optimal seal when light pressure is applied
- Excellent comfort is maintained, even during longer periods of use
- The headbands are flexible and can be adjusted as required
- **Tested in accordance with EN 352-1/352-3**

Applications

For high-level noise exposure. When working with construction equipment, pneumatic drills and in agricultural applications.

68163 301**Optime III****Design**

- The Optime III is the best choice to protect against extreme noise exposure
- Double protectors keep resonance in the defender to a minimum. In doing so, maximum insulation at high frequencies is achieved yet signals and speech are still easy to perceive.
- The acoustic connection between the interior and the space between the protectors ensure optimum insulation at low frequencies
- Wide, softly padded band
- **Tested in accordance with EN 352-1/352-3**

Applications

For extreme noise exposure. For use in airports, mines and machine rooms.

Breathing masks from the Aura™ 9300+Gen3 Series

3M**Design**

The revamped breathing mask 3M™ Aura™ 9300+Gen3 is now in its third generation.

The new 3M™ Cool Flow™ comfort valve offers excellent dissipation of exhaled heat and moisture and significantly reduces exhalation resistance further.

New positioning aids allow wearers to open the mask hygienically, then mould it and put it on. The new high-performance filter technology offers significantly improved respiratory comfort, coupled with reduced volume and weight. A durable and comfortable fabric strap guarantees the best fit. The three-piece design with integrated nose clip adapts to any face shape. Hygienic packs of one.

68206 101

Type 9312+Gen3**Design**

68215

Breathing mask 4279 (maintenance-free)

3M**Design**

- Maintenance-free mask for maximum safety and ease of use
- Two large active carbon filter elements ensure minimal breathing resistance
- Large field of vision thanks to low-profile design
- Parabolic exhalation valve reduces build up of heat
- Soft and gentle mask material
- Lightweight and well-balanced design
- Elasticated strap with head holder
- Easy-to-fasten neck straps

- **Protection level of FFABEK1P3D in accordance with EN 405:2002**

Applications

Organic vapours, inorganic and acidic gases, as well as ammonia up to ten times the MAK value or 1000 ml/m³, whichever value comes first. Fine dusts up to 30 times the limit value.

When working with ammonia, methylamine, chlorine, bleach, hydrochloric acid, sulphur dioxide, hydrogen sulphide, solvents.

Special tools / PPE

Information on the use of personal protective equipment to prevent falls, to restrain users and to save lives.

The applicable rules and regulations of the employer's liability insurance coverage in compliance with regulations BGR 198 and BGR 199, as well as the accident prevention regulations, must be observed.

Fall arrester equipment must be in place (excerpt):

- At workplaces or traffic routes, at and over water or other liquid or solid substances in which it is possible to sink; this applies regardless of the height from which you can fall
- At a fall height of more than 1.0 m on stairways without railings and stairway landings, wall openings, machine control stations, in addition to openings (skylights, ventilation shafts etc.) not equipped with a load-bearing cover securely held in place
- At a fall height of more than 2.0 m at all other workplaces and traffic routes.

Notwithstanding this, the following applies:

- At workplaces and traffic routes on roofs from a fall height of 3.0 m and above
- On walls and tasks carried out on windows from a fall height of 5.0 m and above.

The fall arrest system

The fall arrest system is made up of various individual components, which can be combined depending on the area of application and requirement.

The attachment point

- In accordance with EN 795
- For example, tripod, webbing sling, minifix, permanent systems.

The lanyard

- In accordance with EN 353-2, EN 354/355, EN 360 or EN 358
- For example, guided type fall arresters, Shockyards, fall dampeners, retractable type fall arresters.

The harness

- In accordance with EN 364, EN 358 or EN 813
- For example, safety harness and rescue harnesses, tether, seat harness.

Applications:

Industrial use
Travel/overhead line construction
Wind power plants
Telecommunications
Maintenance

Steel construction
Construction
Fire departments
Events

Standards

Depending on the area of application and the purpose, items of personal fall protective equipment are subject to various standards:

EN 358 Retaining straps

For holding in the working position and for restraint in areas where there is a risk of falling (such as when working on flat roofs). The retaining lugs are usually located on the side around the pelvic bone.

EN 361

For use in climbing protection in conjunction with guided type fall arresters including a rigid anchor line. Climbing protection (such as when working on towers, masts). The climbing protection eyelets are usually located on the abdominal belt, in the centre in front of the body.

EN 361 Full body harness

For securing workers in areas with a risk of falling and for arresting falls (such as when working on towers, masts, building overhangs). The arrester eyelets are located on the back between the shoulder blades (dorsal) or on the chest area (sternal).

Rescue eyelet

Other components/selection:

- EN 341** Descender devices
- EN 353-1** Guided type fall arresters including a rigid anchor line
- EN 353-2** Guided type fall arresters including a flexible anchor line
- EN 354** Lanyards
- EN 355** Energy absorbers
- EN 360** Retractable type fall arresters
- EN 363** Fall arrest systems
- EN 795** Attachment point

68340

Fall arrest system

Set comprises:

Safety harness EN 361, type CS 2 with front and rear arrester eyelet. Sling EN 354 and EN 795, type LOOP 22 kN, 2 m in length. Guided type fall arrester in accordance with EN 353-2, type SKN 10 m in length. Core sheath rope with carabiner FS 51, in a transport case.

Note:

For technical data relating to safety harnesses and fall arresters, refer to art. no. 68350 ff.

68351 - 68353 Guided type fall arresters EN 353-2

68351

Pole restraint rope

Design

Ergogrip SK 12 in compliance with **EN 358**, Ovaloy Tri and FS 51 carabiners. Rope diameter 12 mm. For use in the side retaining lugs in accordance with EN 358. The Ergogrip runner is very small, light-weight and ergonomic. It can be continuously adjusted on the rope.

Note:

Work positioning ropes are used only for the positioning of the workstation.

68352

Design

Guided type steel fall arrester, on flexible anchor line. Incl. automatic snap hook, type FS 51. Energy absorption takes place by gliding on a sheathed-core rope 11 mm in diameter. As soon as the fall arrester stops, it restrains the secured worker at height in an extremely short reaction time, with no unpleasant ripping noise. This reduces the shock of the fall significantly in the first moment. The worker feels safe. The impact is reduced.

68353

Ergogrip SK 16

Design

The Ergogrip is a length-adjustable fall arrester and is used for secure and flexible work positioning. It can be used as a guided type fall arrester or as a work positioning rope. The special, core-sheathed 16-mm rope can withstand edge loads and also heavy loads.

EN 353-2, EN 358.

68355

The new German technical occupational health and safety regulations ASR A4.3 „First aid rooms, resources and facilities“ for first aid provide standardised and legally binding guidelines for all workplaces, whether in heavy industry, workshops, small businesses, the public sector or in educational institutions:

- In administrative companies and commerce:

Up to 50 employees, 1 x DIN 13157 small,
> 50 employees, 1 x DIN 13169 large,
> 300 employees, 1 x DIN 13169 per 300 employees.

- In manufacturing and processing plants:

Up to 20 employees, 1 x DIN 13157 small,
> 20 employees, 1 x DIN 13169 large,
> 100 employees, 1 x DIN 13169 per 100 employees.

- On construction sites:

Up to 10 employees, 1 x DIN 13157 small,
> 10 employees, 1 x DIN 13169 large,
> 50 employees, 1 x DIN 13169 per 50 employees.

One large first aid kit DIN 13169 can also be replaced with two small first aid kits DIN 13157.

68500 - 68503

Disposable overalls (protective suits)

68500

Secutex Pro 5/6

Design

Anti-static chemical protective overall that is dustproof with limited resistance to spray. Hood with elasticated band, dual zip, zip trim, elasticated back, arms and legs. The overall protects against splashes of aggressive, liquid chemicals and is permeable to air and water vapour. The combined polypropylene spunbonded fabric backing and polyethylene-laminate combine maximum protection and abrasion resistance.

Protection class: Cat. III, Type 5, 6.
Virus protection-certified to EN 14126.

Applications

Areas of application include production and bottling in the food, pharmaceutical and cosmetics industries, production in the chemical industry, veterinary protection.

68501

Tritex Pro blue

Design

Dustproof with limited resistance to spray. Anti-static finish. Breathable three-ply SMS material. Even when worn for long periods, the robust suit prevents the build up of heat and moisture. Hood with elasticated band, dual zip, zip trim, elasticated waist, arms and legs. **Protection class: Cat. III, Type 5, 6.**

Applications

For asbestos disposal, processing of material containing glass fibre, for maintenance and renovation work.

68502

Painttex-Plus

Protects against harmful fine dust. Durable, antistatic, wearproof and lint-free. Breathable three-ply SMS material. Hood with elasticated band, dual zip, zip trim, elasticated waist, arms and legs.

Protection class: Cat. III, Type 5.

Applications

For industrial and automotive painters, for renovation work, clean-up work and asbestos removal.

68503

Tritex Pro white

Design

Dustproof overalls made from three-ply SMS fabric, breathable, anti-static. Lightweight. Hood with elasticated band, dual zip, zip trim, elasticated waist, arms and legs.

Protection class: Cat. III, Type 5, 6.

Applications

For asbestos removal, processing of material containing glass fibre, for maintenance and renovation work, for use in the food industry.

Info

Safety shoes in accordance with EN ISO 20345

The European Standards (EN) for shoes used in industrial and commercial fields.

EN ISO 20345 - Test energy of toe cap 200 joules,

EN ISO 20346 - Test energy of toe cap 100 joules,

EN ISO 20347 - no toe cap

EN ISO 20345 Areas of application

SB Meets all basic requirements of EN ISO 20345. Open heel, protective toe caps with 200 joules of resistance.

S1 Full or split leather. In addition to the basic requirements: closed heel, energy absorption capacity, anti-static, protective toe cap with a resistance of 200 joules. Application: In industry, crafts and trade, dry areas.

S1P Same as S1, but with the addition of a puncture-resistant midsole running through the shoe.

S2 Same as S1, suitable for working on wet floors, therefore impermeable to water, able to absorb water vapour. Application: In dry areas, indoors and outdoors.

S3 Meets all the requirements of S2, with the addition of a puncture-resistant midsole running through the shoe. Application: In dry/wet areas, indoors/outdoors, for use as construction shoes/boots and when there is the risk of nail punctures.

68713
